

TEN WARDS. ONE LIGHT LEFT ON.

AFTERHOURS

The Tenth Prescription

The pharmacy closed ten years ago.
Tonight, its lights came back on.

Recover forgotten prescriptions across ten dangerous wards. Conserve your light, hide from the waiting shadows, and decide which names the building remembers.

PIXEL HORROR / GODOT / DESKTOP WEB / EN + KO

A complete ten-ward game-jam campaign, plus a separate short demo. Created and directed by Shivam Gupta with AI-assisted production.

A clear task. Costly safety.

Three sealed records per ward. Reveal them with light, collect them, then return to the dispensing hatch. Every survival tool has a readable purpose.

SNEAK

Hold Shift to move quietly. Plan around the shadow, rather than outrunning every threat.

HIDE

Press E beside a cabinet to break pursuit. Press E again to leave.

PULSE

Space costs 18 charge to reveal nearby sealed names and stun shadows for 4.5 seconds. Press E to collect; each name returns 8 charge.

RECHARGE

E at the teal station restores battery and some composure. Its noise draws pursuit.

TEN-WARD PROGRESSION

01 The Counter	A gentle introduction
02 Cold Storage	Timed low visibility
03 Waiting Room	Recurring alarm
04 Spill Ward	Hazardous residue
05 Two Empty Chairs	Two shadows
06 Failing Filament	Faster battery drain
07 The Long Hall	Faster pursuit
08 Blackwater Archive	Residue plus timed low visibility
09 Return to Sender	Two shadows plus alarm
10 The Tenth Prescription	Three shadows and the final choice

The shadows embody forgotten names and supernatural grief. They are not a depiction of mental illness. The pharmacy setting provides fiction, not medical guidance.

An evening worth remembering.

The product is a finite horror game with a distinctive emotional premise. Its value comes from authored tension, presentation and a world players want to share.

WHAT SHIPS FOR THE JAM

All ten wards are accessible in the jam version. A separate demo introduces the core loop. English and Korean, onboarding, local profiles, progress saving and final story choices support a complete player journey.

WHAT COULD BECOME A BUSINESS

Test an expanded premium edition after observing independent players. A free browser prologue could introduce new chapters and richer presentation. A possible US\$4.99-7.99 price is an unvalidated hypothesis, not proven willingness to pay.

HOW TO VALIDATE

Watch new players enter, understand the objective, finish a ward and choose whether to continue. Test both languages. Fix confusion before adding content. Purchase intent is a conversation; sales are stronger evidence. No market-size or traction claims are asserted.

PRACTICAL OPERATIONS

Godot and static web delivery remove the need for paid inference on each play. Hosting, distribution, localization review, testing and development still have costs. There is no subscription, payment flow or account backend in this release.

LOCAL MEANS LOCAL

Profile names identify local saves, not secure online accounts. Browser data is tied to the current browser and origin. Clearing site storage, private browsing or changing devices can lose progress. No cloud sync is claimed.

Scope: desktop keyboard web play. Mobile controls, controller certification and online services are outside this release. Production readiness remains a testing judgment, not a label guaranteed by this kit.

Two minutes. Real gameplay.

Verbatim narration. Rehearse at a calm pace, then match each sentence to the final exported build. The editable script includes a timed shot list.

My name is Shivam Gupta, and this is AFTERHOURS: The Tenth Prescription.

The pharmacy closed ten years ago. Tonight, its lights came back on. A receipt printed your name, beside ten prescriptions that were never finished.

This is a pixel horror game about what happens to people when their names disappear from the records.

Your task is clear. Explore each ward, reveal three sealed prescriptions with your light, collect them, and return them to the dispensing hatch. But something is still waiting inside.

The same light pulse reveals a name and stuns nearby shadows. You can also sneak past a shadow or hide in a cabinet. Charging restores your light and some composure, but the noise attracts pursuit. Safety always comes with a decision.

Across ten wards, the danger changes. Visibility drops in timed cycles. Alarms draw shadows toward you. Residue makes familiar routes hazardous. Later floors combine these threats, so survival depends on what you have learned.

The experience includes English and Korean, a first-time tutorial, local saved progress, and a separate short demo. The full ten-ward campaign is accessible in this game-jam version. It runs in a desktop browser, with no paid service needed to play.

The story changes the meaning of the chase. These shadows are carrying the names of people the world forgot. Your sister, the pharmacy's last owner, refused to let those names disappear. At the end, you decide what the pharmacy remembers.

The commercial direction is a future expanded premium game, introduced through a free browser prologue. That is a hypothesis we will test with players, not a claim of proven demand.

AFTERHOURS asks one question: when someone disappears from the records, who keeps the light on?

Show what the game does.

CAPTURE SEQUENCE

0:00-0:20	Title, creator credit, receipt opening
0:20-0:43	Reveal a name, collect it, show hatch and first shadow
0:43-0:59	Sneak, cabinet, pulse and charging tradeoff
0:59-1:17	Timed darkness, alarm, residue, multiple shadows
1:17-1:34	Language switch, tutorial, continue, demo menu
1:34-1:49	A memory and the final choice
1:49-2:05	Future direction, then title and final question

EVIDENCE BEFORE ADJECTIVES

Require a clean boot, all ten reachable objectives, working pause/retry, save persistence, demo isolation, both endings and complete Korean glyph rendering. Test the exported web build over HTTP, not only the editor.

The accompanying QA rubric is internal AI-assisted self-review. Its provisional score is not independent judging or user evidence. Final executable test logs take precedence. Human difficulty and localization review remain valuable release work.

CREDITS AND DISCLOSURE

Shivam Gupta: creator and product direction. AI assistance contributed implementation, writing, procedural pixel art and synthesized audio. No specific manual coding work is invented. Follow the organizer's actual assistance and licensing rules; eligibility is not certified here.

Original project assets are documented in `assets/LICENSE_ASSETS.md`. Noto Sans Korean and Space Mono retain bundled OFL notices. Godot retains its own license. Preserve third-party notices in exports.

HAND-OFF

Deliver the playable export, Godot source, README, this kit and the editable narration. Shivam records the voiceover and real screen footage. Remove any feature claim whose final corresponding behavior is absent.
